

Hangzhou Lizhan Hardware Jiaxing Power Fastener High Quality Upgrade & Application for TS16949

Lizhan Hardware & Power Fastener has been engaged in screw export since its establishment in 2007. To meet the needs of high-end customers, in 2009, they invested in their first production line in Jiaxing, Zhejiang Province, to mainly produce higher quality screws, including self-drilling screws, deck screws, and special purpose (electric tapping) machine screws used on composite panels, windows, concrete, furniture, steel pipes, roofing installations, and more. The products are exported to more than 40 countries all over the world, and the company has created brilliant achievements with its customers!

One-stop Manufacturing with Sufficient Annual Capacity

Hangzhou Lizhan Hardware occupies 30 acres (28,000 square meters) of land. Their factory has 130 sets of equipment, 2 heat treatment lines, 2 fully automatic packaging lines, and automatic bagging machines. With more than 60 employees, they have an annual capacity of over 8,000 tons and export over 1,000 containers to customers worldwide each year. In addition, their external collaborators provide a capacity of over 20,000 tons. The combination of a complete in-plant production line and an external collaborative supply chain gives Hangzhou Lizhan Hardware the inherent ability to provide sufficient capacity to customers worldwide, providing a strong backing at the most competitive prices in the international market at a time when the global supply chain is being challenged.

杭州力展五金 高质量化升级 申请 TS16949 认证

High Quality Assurance

Planning to Apply for Automotive Certification

Their products are becoming more high-end! In addition to the original ISO 9001:2015 certificate, **they are in the process of applying for TS16949 automotive fastener certification and RoHS (Restriction of Hazardous Substances) certification**, which shows that their technological level is well established and they are striving to provide quality fastener products to automotive companies.

In order to comply with the requirements of overseas buyers from Europe and the U.S., they are equipped with their own inspection room, heat treatment and hardness machines, torque testers, mechanical performance inspection equipment, surface treatment salt spray testers and various dimensional measuring gages. The products are exported after going through three procedures, including initial inspection, sampling inspection and pre-shipping inspection, in order to provide global customers with satisfactory quality products!

High Product Cost Ratio

Flexible Trading Terms

1. They **offer great quality-ratio products**. They have the best price for the same quality, and the best quality for the same price.
2. They also have professional service staff to **solve problems for customers including small lot size, complicated product types and difficulty in procurement**.
3. They also **provide flexible payment terms**, so that customers can use the same money to purchase more products to take market shares, and achieve a win-win!

2023 will be a critical year after the market is fully reopened. The company said, "We will focus on new products so our customers can develop more high quality markets. Given that Covid-19 has stalled development for three years, we will go to many countries one by one in 2023 to communicate with customers face-to-face and strive to create more value for them! □"
