The E-series lithium battery rivet tool which Shanghai Tone Machine Co., Ltd. (“TONE”) has recently released features a powerful motor, a long-lasting battery with stable recharging and discharging, longer product lifecycle and the charging time of no more than 45 min. It shows stable performance & a faster riveting capability and is available with the optional 20V/4.0AH battery, greatly increasing the power of this tool. Weighing only 1.5KG (excluding the battery) and being assembled with a replaceable riveting nozzle, this tool is compatible to various sizes of rivets made of any material. Its special non-slip “claws” allow end-users to operate it and finish the work of fixation in a safer, more highly-efficient and easier way.

TONE’s E8000 Series Battery Rivet Nut Tool can be used to fasten rivet nuts (M4-M10) and replacing its riveting nozzle with a new one is also quite convenient. Compatible to various materials of rivet nuts, the tool can be operated with only one hand, greatly increasing the convenience of use. The battery used in the E8000 Series can be also used in the E5000 and E6000 Series, which can thus satisfy various riveting demands of different customers.

Thus far, the E5000/E6000/E8000 battery rivet tools have been widely recognized in European and N. American markets, and the export volume of these products is also steadily on the rise.

“SWEET” pneumatic power rivet tools and rivet nut tools are a well-known brand from China and are especially used for industrial riveting, which have been also exported to many countries in Europe, N. America, S. America and Southeast Asia and which are used in automotive and sheet metal industries. Compared to similar products made by other competitors, its latest lithium battery rivet tool features the performance of stronger riveting power and quicker riveting speed.

TONE, established in 2003, has been dedicated to manufacturing pneumatic rivet tools for nearly 16 years. It is a company integrating production, sales, technology and maintenance & repair service together, and is also dedicated to offering end-users advanced riveting and assembly solutions and service. Its current products include automatic pneumatic rivet nut tools, pneumatic rivet tools, battery rivet tools, automatic riveting equipment, as well as various blind rivets and rivet nuts.

With years of effort, TONE has had all of its automatic rivet nut tools and rivet tools patented in China and certified to CE. Most importantly, TONE has abundant technology and owns a group of technical staff, R&D/sales teams, and maintenance & repair engineers, particularly good at working with customers to solve technical issues in applications and providing customers with customized service. ■
