

JIAXING XC WASHER

Seamlessly Integrated Efficiency, Precision, and Stability

Jiaxing XC Washer contact: **Jeremy Chiang, General Manager** Email: jeremy@xcwasher.com

Jiaxing XC Washer Co., Limited has specialized in the development and manufacturing of washers and stamped parts for over 20 years. It provides **high-quality products made from low-carbon steel, stainless steel, brass, copper, aluminum, or special materials, compliant with major European, American, and Japanese standards including DIN, ANSI, ISO, and JIS.** Its products are widely adopted globally across industries including construction, steel structures, photovoltaics, power generation, machinery, industrial equipment, railways, energy, hydraulics, chemical engineering, and shipbuilding.

Through continuous upgrades to equipment and processes, XC Washer now operates **over 80 automated stamping machines with a complete die inventory, capable of supplying metric (M1.6-M100) and inch (#0-4") specifications.** 60% of its production is automated or semi-automated. By leveraging mass production and employing high-precision composite/progressive die processing, it simultaneously maximizes efficiency, precision, and product consistency to achieve optimal performance.

To ensure consistent quality and reliability, every batch of XC Washer products undergoes initial inspection, surface treatment inspection, and packaging inspection in accordance with international standards. Only after confirming quality compliance are products stored in inventory. For diverse customer application requirements, it provides at least two options, clearly outlining their respective advantages and disadvantages

to assist in selecting the most suitable product solution. For customization, it can develop molds and produce samples based on customer drawings within one month, followed by mass production upon confirmation. Its products are widely sold in markets including Europe, America, Japan, and Australia. XC Washer can also manufacture according to various customer and product standards and maintain corresponding inventory based on customer preferences.

General Manager Jeremy Chiang stated: "Beyond washers and stamped parts, we can also supply fasteners such as bolts and nuts through our partner factories. This not only significantly reduces customer communication and shipping costs, but also ensures consistent product assembly. Moving forward, we aim to enhance our development of tapered washers and leverage greater supply chain integration capabilities to provide customers with one-stop services." ▣
