In response to increased production capacity requirements and the expansion of its product lineup, Handan City Daoning Fastener Manufacturing Co., Ltd. has recently

completed its relocation to a new facility. The improved production environment and expanded space will significantly enhance the company's ability to serve customers. Specializing in the production of diverse fastening solutions including screws, bolts, nuts, studs, and washers made of carbon steel, alloy steel, stainless steel, aluminum, and brass, Daoning's products are widely used in structural steel, metal construction, oil & gas, towers & utility poles, and decorative applications. The quality meets various int'l standards, and it offers options for different strength grades and surface treatments based on customer requirements, and maintains stable exports to markets in Europe, the Americas, Asia, Australia, Africa, and the Middle East.

**The new factory equipped with automated machinery and production lines compliant with GB/DIN/ANSI/ISO standards** not only provides Daoning with greater capacity and shorter lead times, but its commitment to comprehensive testing covering everything from raw materials and molds to forming, heat treatment, hardness, surface treatment, and packaging also ensures more rigorous quality control. Although order requirements vary among global customers, Daoning President Gavin Ning emphasized: "We'll never delay shipments and always ship products ahead of schedule. We also constantly monitor customer feedback to conduct market analyses, assist customers in resolving issues, and adapt to market changes."

Daoning has always been at the forefront of product innovation and new market exploration, dedicating significant resources to the heavy industry and electrical fastener sectors while continuously expanding its product line to keep pace with the times. Looking ahead, Daoning will continue to provide global customers with exceptional quality, competitive pricing, on-time delivery, a diverse product range, and high-level customer service and OEM capabilities. With the support of its new factory, the company will continue to gain market share in the int'l market. ■
