

Kwantex Research Inc.

Continuous Innovation and Focus on ESG

Kwantex Research Inc. is an R&D-oriented company since 1996. In recent years, the company has continuously developed new products, applied for new patents as well as safety certifications in different countries. It hopes that through the functions and performance of new products, it can help customers increase market share and ensure it stays competitive within the global market.

The latest innovative products are as follows:

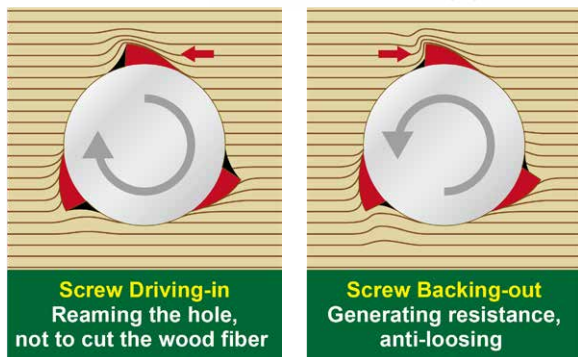

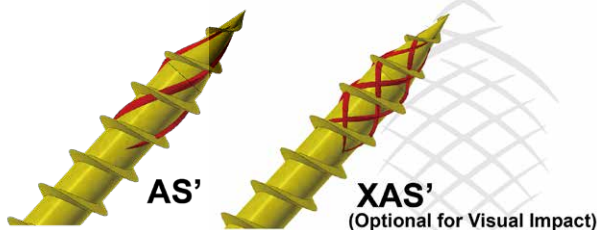

(1) TTX® Drive and Bit

TTX® Drive features a special six hook design that helps avoid cam-out and offers superior fit quality with

TTX® Bit and maximize torque transmission. TTX® Bit fits all 6-lobe drives, and all 6-lobe bits fit TTX® Drive.

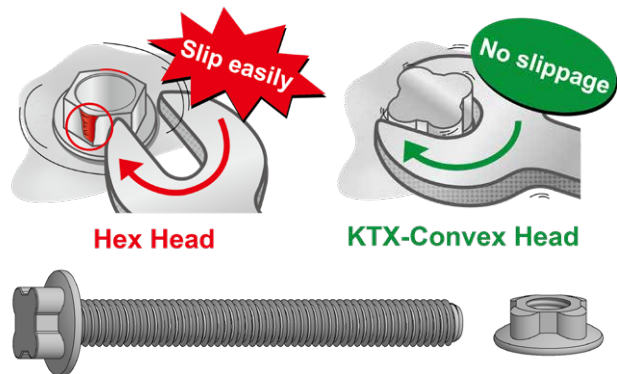

(2) Archimedes' Secret® (AS'/XAS') Thread

AS'/XAS' Thread can fast grab the wood surface and ream the hole without cutting the wood fiber, so the thread root can connect with the wood thus increase the tightness. AS'/XAS' Thread also reduces the driving torque, anti-split, anti-loose and remains the pull out value, a great design to replace regular TY-17 or two cuts on thread.

(3) KTX-Convex (VK) Head & VN Nut

Screws or bolts with KTX-Convex (VK) Head offers stable and high torque transmission, no wear out, no overdrive, and no slippage during installation. The special shape design of VK head and VN nut enables them to be held firmly by hand.

In order to go on meeting of its customers' requirements around the world, it provides additional supports and services to enhance their satisfaction.

- R&D capability: Professional R&D and sales teams to jointly discuss and develop new products together with customers, offering many patented designs for ODM. 100 R&D product developments and at least 5 domestic and international patents owned per year.
- Marketing support: Sponsor samples and marketing resources to help customers promote its patented products.
- Quality assurance: With ISO certification, strict production and packaging control, and quality inspection process.
- Prompt service: Customers can check order status, shipping information, quality reports downloading at any time through Production Online Service.
- After-sales service: In case of customer complaints, it always keeps a positive and responsible attitude to find out the root cause, effective solutions, and continue to improve.

Investing in ESG, Kwantex has established an environmental management and greenhouse gas investigation team and a sustainable development team to provide employees with a safe, healthy and friendly environment, implementing local care, social participation, and environmental sustainability (education, culture, assistance, and environmental protection).

Kwantex also obtained ISO 14064-1:2018 (Greenhouse Gas Verification Statement) in 2022 and ISO 14067:2018 (Product Carbon Footprint Verification Statement) in 2023. Kwantex' ESG sustainability report was also completed at the end of 2024, with the company also committing itself to green electricity in 2025 as a practical manifestation of its investment in corporate governance, environmental sustainability and social care. ■
